

Client Review — Meeting Notes

Client: Kadir (household account) **Date:** 3 July 2026, 15:00–15:45 (video call) **Present:** Kadir; Relationship Manager; Investment Specialist (Meridian Family Office) **Purpose:** Review the intended long-term allocation and agree the operating strategy for the current stage.

Objectives & risk

- Primary objective: **balanced growth** with capital preservation as a strong secondary consideration.
- Risk appetite: **moderate**. Ability to take risk supported by a stable income and a multi-year horizon (10+ years).
- Explicitly uncomfortable holding US large-cap beta at current valuations.

Agreed long-term benchmark (UOB account)

- USD money-market fund — 10%
- Gold ETF — 20%
- Bond fund (medium duration) — 20%
- Nasdaq-100 ETF — 20%
- S&P 500 ETF — 30%

Operating strategy for the current stage

- Hold the US equity sleeves in the money-market fund for now; deploy in steps on a **15–20% pullback**. Up to an initial 5% is acceptable before then.
- Accumulate gold **below USD 4,000/oz**; do not chase strength.
- Build the bond sleeve **in tranches**; client asked for our view on rate-move sensitivity.
- Across all sleeves: **low fees, good liquidity, no lock-ups**, no complex products unless clearly justified.

Constraints & preferences

- Non-US person for tax.
- Wants the proposal written plainly, with the reasoning easy to follow.
- Mild preference for quality / well-established issuers over niche products.

Action items

1. RM to source low-cost, liquid instruments for each sleeve (money market, gold, medium-duration bonds, US beta).
2. Investment Specialist to include a short note on interest-rate sensitivity of the bond sleeve.
3. Prepare a proposal that keeps most US-equity money in cash today, with a written pullback rule.
4. Note the expected Q4 liquidity event (~USD 500k) as future dry powder.

Internal meeting notes — for advisory context. Not investment advice.
