

THE TACTICAL-INSTRUCTIONS WORKFLOW

From the client's words to a working proposal

How the copilot turns the client's instructions and documents into a proposal — and the one rule that keeps every number trustworthy.

AT A GLANCE

Three steps in, one prompt, one proposal

The first three steps are what the analyst does. Everything to their right is automatic — and fully visible in the prompt.

The rest of this deck follows what the copilot assembles and what the AI Model does with it.

STEP 1 • ASSEMBLE

One self-contained prompt — everything in one place

The copilot assembles a single prompt: the deterministic FACTS plus the raw context. Numbers come only from FACTS; the rest is intent and context.

ROLE + GROUNDING RULES

analyst persona · FACTS-only

INTAKE PARAMETERS

mandate · risk · limits · targets

FACTS (JSON)

the only source of numbers

HOLDINGS + STATEMENT SOURCE

parsed positions + raw text

RESEARCH / OTHER DOCUMENTS

full text, as context

TACTICAL INSTRUCTIONS

the client's words, verbatim

Shown on the Proposal page — editable, copyable, downloadable — so the client can read exactly what the system asks the AI Model to do.

STEP 2 • GENERATE

Read it, edit it, test it anywhere

Generate with the AI Model

Runs the live AI model on the prompt. Its narrative folds into the proposal deck as a commentary slide. Falls back to a deterministic summary with no key.

Model-agnostic UI — the button and badge read “AI Model”, never a vendor name.

Copy into any AI model

The prompt is self-contained, so pasting it verbatim into any external AI model reproduces the proposal — the way the client tests the system across models.

Edit before generating; the FACTS block stays the only source of numbers.

Both paths use the same prompt. There is no classification, review table, or enforcement step in between — the analyst reviews the prompt itself.

STEP 3 · THE PROPOSAL

AI prose around deterministic tables

The prompt

On the Proposal page — exactly what the AI Model was asked to do.

TRANSPARENCY

CIO commentary

The AI Model's narrative, shaped by the parameters, documents and tactical instructions — quoting only the computed figures.

GENERATED PROSE

Deterministic tables

Allocation, drift, rebalance and suitability — computed by the engine and unchanged by the AI.

PPTX · PDF

THE GUARDRAIL

The AI writes prose — never a number

THE AI MODEL CAN SHAPE

- The CIO commentary and how it reads
- Which considerations to weigh, from the documents & instructions
- The emphasis and ordering of the narrative

THE AI MODEL NEVER INVENTS

- A figure — every number comes from the FACTS block
- Suitability thresholds or the rebalance
- Holdings — every dollar from the real book

Qualitative claims drawn from the client's documents are context — not independently verified. Every figure is computed deterministically by the engine.
