

The tactical-instructions workflow, at a glance

How the copilot turns the client's instructions and documents into a proposal — read left to right.

1 · CLIENT'S WORDS + DOCS

In plain language, plus statements & research

"gold below USD 4,000/oz"

"add Nasdaq after a 15-20% pullback"

"buy the bond fund in tranches"

"low fees, good liquidity"

+ statements · research · notes

2 · ONE PROMPT

Assembled by the copilot:

- Intake parameters
- FACTS (the only numbers)
- Holdings + statement source
- Research / other documents
- Tactical text (verbatim)

Editable · copyable · on the Proposal page

AI Model writes the narrative

GENERATED PROSE

The CIO commentary, shaped by the parameters, documents & instructions.

Deterministic tables

COMPUTED, NOT INVENTED

Allocation · drift · rebalance · suitability — computed by the engine.

A portable prompt

TEST ANY MODEL

Copy it into any AI model to reproduce the proposal and compare outputs.

THE GUARDRAIL

The AI Model writes prose only — every figure is computed deterministically by the engine, so nothing is invented. Qualitative claims drawn from the client's documents are context, not independently verified. The UI is model-agnostic — it always reads “AI Model”.
