

THE TACTICAL-INSTRUCTIONS WORKFLOW

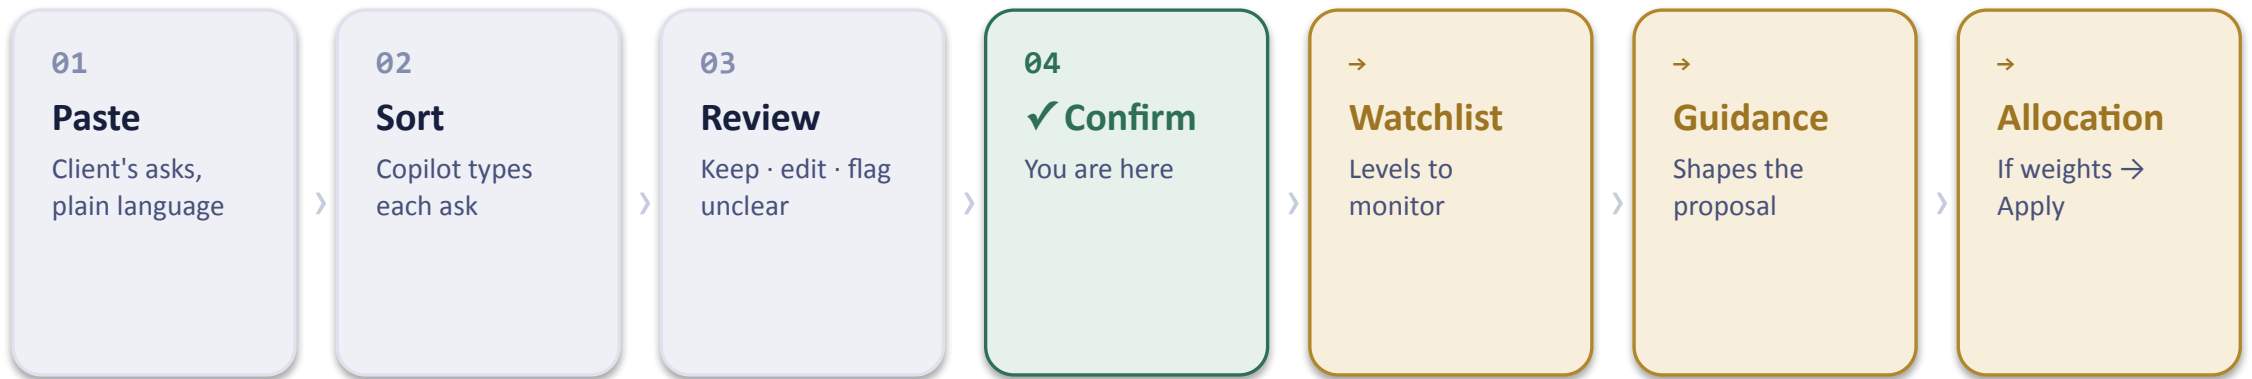

From the client's words to a working proposal

What the copilot does the moment you confirm the sorted items — and the one rule that keeps every number trustworthy.

AT A GLANCE

Four steps in, three outputs out

The first four steps are what the analyst does. Confirm is where this walkthrough begins — everything to its right is automatic.

The rest of this deck follows what leaves the Confirm step.

STEP 1 • AFTER CONFIRM

Each ask is now a structured record

A sentence becomes fields the system can act on. Every level is copied from the client's own words — never invented.

TYPE	INSTRUMENT	ACTION	LEVEL (COPIED)
entry_trigger	Gold ETF	Buy	USD 4,000/oz

From: "the gold ETF can be bought below USD 4,000/oz"

Nothing computed — just sorted and copied.

STEP 2 • THE SPLIT

The items split by what they're for

Entry triggers → Monitoring watchlist

Conditional, level-based asks become a live list the portfolio is watched against — the retention hook.

Gold ETF • below **USD 4,000/oz** • Buy
S&P 500 ETF • **-15% to -20%** from high

Every item → Analyst guidance

All items (including the triggers) carry forward as intent that shapes the written advice — never as figures.

Execution style • "buy in tranches"
Selection criteria • "low fees, good liquidity"
Open question • "impact of rate hikes?"

⚠ Anything ambiguous is typed needs-clarification and held out of the proposal until resolved. If the client stated target weights, Confirm surfaces a Proposed allocation to Apply.

STEP 3 · WHERE THEY APPEAR

Three places the analyst sees them

Monitoring watchlist

Triggers, ready to watch the book against.

S&P 500 ETF -15/-20%
Gold ETF < \$4,000

IN THE COPILOT

Proposal deck

Listed under "Analyst notes folded into this proposal" on the data & method slide.

PPTX · PDF

CIO commentary

Prose shaped by the guidance — quoting only the computed figures.

GENERATED NARRATIVE

STEP 4 • THE GUARDRAIL (V8: TIERED)

Guidance can gate a number — never invent one

GUIDANCE CAN SHAPE & GATE

- The monitoring watchlist & the commentary
-  Enforced trigger gates a rebalance buy (→ hold) vs a sourced live price
- What the analyst is prompted to weigh

GUIDANCE NEVER INVENTS

- A figure from thin air — enforced checks use a price with provenance
- Suitability thresholds
- Holdings — every dollar from the real book

Each item is tiered  enforced /  monitored /  advisory. A client's condition can gate or flag a trade — never fabricate one.
